

Lesson plan. Create your own activities.

In this lesson, students learn the benefits of using different tools and programs to create their own activities.

Objectives

Students will be introduced to the concept of education resources on the web and they will be able to decide and create their education contents.

Learning outcomes

- Students will work in small groups.
- Students will use different applications and TIC resources.
- Students will design the lesson plan.
- Students will get the intellectual skills required to make use of this knowledge and understanding.

Lesson procedure

Introduction

There are more and more contents online in the world. It is important for the students to understand how to use the web search effectively to find quality sources appropriate to their task. We've created this lesson to help our students in their schoolwork and beyond.

First we will show the different places in the website where they can find applications or programs to create their own activities to evaluate your knowledge. Afterwards it will ask to the students that familiarize with the

program selected. The group will decide the contents that they want to evaluate and will look in the network for the necessary resources. To the end they will show the results to its partners.

Student activity

Follow the steps below to guide your students through this lesson plan. See student guide links at right.

- Step 1: Look for education resources on the web.
- Step 2: Choose an applications.
- Step 3: Select the educative contents.
- Step 4: Development of the lesson.
- Step 5: Writing the report.

- **Conclusion**

Assess students on the following:

- Their ability to work and solve problems collaboratively
- Their demonstrated understanding of the uses of different programs.

- The understanding of the contents.
