

INSTRUCTIONS ON HOW TO USE IT:

This Excel game is to be used in Math classes as a help-to-understand tool for the students. It contains several types of functions ($y=ax$; $y=ax^2+b$; $y=a \log x +b$, etc), one in each sheet. The user will be able to choose a value for "a" and "b", and the function will be graphically represented, always contrasted with the basic function of its type ($y=x$, $y=x^2$, $y=\log x$, etc), so that the student has a graphic approach to mathematical analysis.
