

Database Programming with SQL

13-3: Modifying a Table

Practice Activities

Objectives

- Explain why it is important to be able to modify a table
- Explain and provide an example for each of the DDL statements—ALTER, DROP, RENAME, and TRUNCATE—and the effect each has on tables and columns
- Construct a query and execute the ALTER TABLE commands ADD, MODIFY, and DROP
- Explain and perform a FLASHBACK QUERY on a table
- Explain and perform FLASHBACK table operations
- Track the changes to data over a period of time
- Explain the rationale for using TRUNCATE versus DELETE for tables
- Add a comment to a table using the COMMENT ON TABLE command
- Name the changes that can and cannot be made to modify a column
- Explain when and why the SET UNUSED statement is advantageous

Try It / Solve It

Before beginning the practice exercises, execute a DESCRIBE for each of the following tables: o_employees, o_departments and o_jobs. These tables will be used in the exercises. If they do not exist in your account, create them as follows:

Create the three o_tables - jobs, employees, and departments - using the syntax:

CREATE TABLE o_jobs AS (SELECT * FROM jobs);

CREATE TABLE o_employees AS (SELECT * FROM employees);

CREATE TABLE o_departments AS (SELECT * FROM departments);

2. Add the Human Resources job to the jobs table:

INSERT INTO o_jobs (job_id, job_title, min_salary, max_salary)
VALUES('HR_MAN', 'Human Resources Manager', 4500, 5500);

3. Add the three new employees to the employees table:

INSERT INTO o_employees (employee_id, first_name, last_name, email, hire_date, job_id)

VALUES(210, 'Ramon', 'Sanchez', 'RSANCHEZ', SYSDATE, 'HR_MAN');

4. Add Human Resources to the departments table:

INSERT INTO o_departments(department_id, department_name)
VALUES (210,'Human Resources');

You will need to know which columns do not allow null values.

- 1. Why is it important to be able to modify a table?
- 2. CREATE a table called Artists.
 - a. Add the following to the table:
 - artist ID
 - first name
 - last name
 - band name
 - email
 - hourly rate
 - song ID from d_songs table

b. INSERT one artist from the d_songs table. c. INSERT one artist of your own choosing; leave song_id blank. d. Give an example how each of the following may be used on the table that you have created: 1) ALTER TABLE 2) DROP TABLE 3) RENAME TABLE 4) TRUNCATE 5) COMMENT ON TABLE 3. In your o_employees table, enter a new column called "Termination." The datatype for the new column should be VARCHAR2. Set the DEFAULT for this column as SYSDATE to appear as character data in the format: February 20th, 2003. 4. Create a new column in the o employees table called start date. Use the TIMESTAMP WITH LOCAL TIME ZONE as the datatype. 5. Truncate the o_jobs table. Then do a SELECT * statement. Are the columns still there? Is the data still there? 6. What is the distinction between TRUNCATE, DELETE, and DROP for tables?

Copyright © 2017, Oracle and/or its affiliates. All rights reserved. Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

7. List the changes that can and cannot be made to a column.

8. Add the following comment to the o_jobs table:

"New job description added"

View the data dictionary to view your comments.

Rename the o_jobs table to o_job_description.

10. F_staffs table exercises:

- a. Create a copy of the f_staffs table called copy_f_staffs and use this copy table for the remaining labs in this lesson.
- b. Describe the new table to make sure it exists.
- c. Drop the table.
- d. Try to select from the table.
- e. Investigate your recyclebin to see where the table went.
- f. Try to select from the dropped table by using the value stored in the OBJECT_NAME column. You will need to copy and paste the name as it is exactly, and enclose the new name in " " (double quotes). So if the dropped name returned to you is BIN\$Q+x1nJdcUnngQESYELVIdQ==\$0, you need to write a query that refers to "BIN\$Q+x1nJdcUnngQESYELVIdQ==\$0".
- g. Undrop the table.
- h. Describe the table.
- 11. Still working with the copy f staffs table, perform an update on the table.
 - a. Issue a select statement to see all rows and all columns from the copy f staffs table;
 - b. Change the salary for Sue Doe to 12 and commit the change.
 - c. Issue a select statement to see all rows and all columns from the copy f staffs table;
 - d. For Sue Doe, update the salary to 2 and commit the change.
 - e. Issue a select statement to see all rows and all columns from the copy_f_staffs table;
 - f. Now, issue a FLASHBACK QUERY statement against the copy_f_staffs table, so you can see all the changes made.
 - g. Investigate the result of f), and find the original salary and update the copy_f_staffs table salary column for Sue Doe back to her original salary.
